

From 7 Days to 1 Day

Automating missing-document collection and verification after loan login

One secure upload link. Instant OCR + AI verification. Branch reviews only the exceptions.

Today: a manual loop that takes 7+ days

Every missing or unclear document sends the file back through sales and branch

7+ days

minimum turnaround

4 handoffs

customer, sales, transit, branch

2-3 visits

to the customer per case

No visibility

of status until papers arrive

What the delay is costing us

The cost is not only time: it is revenue, sales capacity and customer trust

Slow disbursement

Sanctioned loans wait a week or more; interest income and customer momentum are lost.

Sales used as couriers

Relationship managers travel to collect papers instead of sourcing new business.

Rework every cycle

Branch Ops checks the same file 2-3 times; errors are found late, not at the source.

Customer drop-off

Repeated calls and visits frustrate agri customers; some move to competitors.

No tracking

No single view of which document is pending, with whom, or for how long.

Physical document risk

Paper changes hands several times; risk of loss, misplacement and audit gaps.

Proposed: upload once, verified in minutes

The customer or sales uploads on a secure web page; the system checks and replies instantly

Result: customer interaction, verification and re-submission all happen in the same session, so the file is complete the same day.

Turnaround: 7+ days becomes same day

Where the time goes, today versus the automated flow

Technical architecture: workflow view

One parent per agreement, one child per missing document, three review stages

Customer upload portal

Opened from the SMS link; shows only missing documents with photo or file upload

Branch review portal

Agreement list, document-level journey and where each document is pending

REVIEWER DECISION

Overall match 84% — address differs; other key fields match.

Approve Document

Request Re-upload

Re-upload needs a reason; it is shown to the customer.

How automated verification decides

Every document gets a confidence score; only uncertain cases reach a person

Readable?

Image quality, all pages present, not cropped

Right document?

Classified as the requested type (land record, ID, bank statement)

Data matches?

Name, ID, survey number and amounts match loan application

Genuine & current?

Tamper signs, expiry and issue date checks

Auto-accept

High confidence

Moves straight to disbursal checklist

Branch review

Medium confidence

Ops sees document beside extracted data

Re-upload now

Low quality / mismatch

Customer told the exact reason instantly

Reliable use of AI: it checks, people decide

AI reads and matches documents; trust is earned in measured phases, with staff owning every decision

Gate to move up a phase: proposed $\geq 98\%$ agreement with staff decisions on at least 1,000 pilot documents, signed off by Credit and Ops.

GUARDRAILS IN EVERY PHASE

Effort per case: 10 hours down to 1 hour

Staff hours spent per missing-document case, by activity

90%

less staff effort per case

Biggest win

Sales visits drop from 6 hours to 30 minutes of optional assisted upload. That time goes back to sourcing loans.

Cost comparison: existing vs new process

Per case and per year at 1,000 cases a month; detailed assumptions on slide 14

Cost line	Existing	New process
Gap identification & follow-up calls	₹600 · 1.5 h	— automated alerts
Sales visits to collect documents	₹3,000 · 6 h	₹250 · optional assist
Travel (2 visits per case)	₹600	—
Handover & branch re-validation	₹1,000 · 2.5 h	₹200 · exceptions only
OCR / AI verification	—	₹0 · in-house OCR
SMS / WhatsApp messages	—	₹10
Bank infrastructure	—	₹100
Cost per case	₹5,200	₹560
Cost per year (12,000 cases)	₹6.24 Cr	₹0.67 Cr

89%

lower cost per case
₹5.57 Cr saved a year

Existing = staff time + travel. New = remaining staff time + messaging and bank infra; OCR runs in-house. One-time build cost excluded.

Annual impact

Illustrative, at 1,000 missing-document cases per month (assumptions on next slide)

108K

staff hours saved per year

₹5.57 Cr

net saving per year, after
SMS & infra

~54 FTE

capacity freed for
business

7 → 1

days turnaround

RUN COST PER YEAR • at 10,000 documents / month

₹0

OCR / AI • in-house, ₹0 / doc

₹1.2 L

SMS / WhatsApp • ₹1 / doc

₹12.0 L

Bank infra • fixed ₹1 L / month

₹13.2 L

total = ₹11 / document, ₹110 / case

Plus revenue upside: disbursing 6 days earlier adds about ₹740 interest per case, roughly ₹0.89 Cr a year, before counting fewer customer drop-offs.

Per case: ₹5,200 today vs ₹560 automated (₹450 staff + ₹110 run cost) = ₹4,640 saved. Infra is fixed, so ₹/doc falls with volume: ~₹6 at 20K, ~₹3.5 at 40K docs/month.

Assumptions behind the numbers

Indicative figures; replace with branch MIS data before final sign-off

Input	Value used	Basis
Missing-document cases	1,000 / month	To be confirmed from LOS pendency report
Sales RM / Branch Ops cost	₹500 / ₹400 per hour	Blended CTC incl. overheads
Travel per customer visit	₹300	Fuel / conveyance, 2 visits per case today
Staff hours per case	10 today → 1 automated	Activity breakdown on effort slide
Documents processed	10,000 / month	OCR + messages; conservative, incl. re-uploads
OCR / AI processing	₹0 / document	PaddleOCR in-house; no per-page fee
SMS / WhatsApp	₹0.25 × 4 per document	Link, OTP, reminder, status; incl. GST
Bank infrastructure	₹1,00,000 / month	App, workflow, OCR service, DB, storage; fixed
Loan size / rate / days saved	₹5,00,000 / 9% / 6 days	For interest-upside estimate only
Hours per FTE	2,000 / year	Standard working hours

Excludes one-time build cost and drop-off revenue benefit. Run-cost rates are indicative 2026 prices; confirm SMS rates and server cost with IT.

Built-in controls and compliance

Automation adds control rather than removing it

Data protection

Encryption in transit and at rest; Aadhaar and PAN masked on screen and in logs.

Full audit trail

Who uploaded, what the system decided, who approved, with timestamps.

Human in the loop

Auto-accept only above a set confidence; thresholds owned by Credit and Ops.

Secure access

One-time links with OTP and expiry; role-based access for staff.

Data stays in India

Hosted on bank-approved infrastructure per RBI data localisation norms.

Accuracy monitoring

Weekly review of AI decisions vs manual checks; models retuned as needed.

Phased rollout

Start small, measure, then scale across branches

Pilot success measures: turnaround under 1 day • 80%+ documents auto-verified • zero sales visits for document collection

Thank you
